Jordanian Nursing Council

Psychiatric Mental Health Nursing, Scope of Practice, Professional Standards, Competencies, and Indicators

2023

The Jordanian Nursing Council

The Jordanian Nursing Council (JNC) is a national governmental regulatory institution for nursing and midwifery in Jordan. The JNC is governed by a board of directors headed by Her Royal Highness Princess Muna Hussein as president of the council and is composed of 14 representatives from healthcare institutions and community representatives. JNC aims to protect and promote the health status of the community through regulating and governing the nursing profession in education and practice.

Foreword

The **"*Psychiatric Mental Health Nursing, Scope of Practice, Professional Standards, Competencies, and Indicators*"** is a policy document developed by the Jordanian Nursing Council to regulate and unify the standards for the practice of mental health nurses. It includes national standards and competencies for the general and advanced practice roles of Psychiatric Mental Health Nurse (PMHN).

This document aims to standardize practice and safeguard the health and wellbeing of people. The document is a guide for academic and practice institutions; educational institutions need to transfer the content of this very important document and deal with it as a national curriculum for the undergraduate and graduate education of nurses and midwives to prepare them for fitness for practice roles, and create a generation that are responsive, ethically committed and supportive for the mental wellbeing of people.

Practice institutions need to take this document as a policy umbrella for the practice of mental health and their commitment to implement and create a positive environment to allow nurses to function within the agreed upon scope of practice and competencies stated in this document. Institutions need to use these competencies in finalizing job descriptions, roles, and responsibilities as a tool for the performance evaluation of mental health nurses.

This document was developed with outstanding efforts from national academic and service intuitions, in addition to expert validation by mental health advanced practitioners.

I would like to express my sincere appreciation to all who contributed to the development of this unique document. The implementation of this document at the national level by all institutions is a challenge, but we trust your good will and abilities to take it forward and present Jordan as a regional model in the mental health area.

Introduction

This document includes the scope of practice, nursing standards, and competencies for psychiatric mental health nursing in Jordan. The JNC aims to enhance nursing services in Jordan through a sound regulatory system that encompasses legislations, standards, and policies. The JNC has developed this document collaboratively with partners to assure quality services and safe practice. Psychiatric Mental health practice is one of the main areas of concern and interest for the JNC. Extensive efforts were conducted to strengthen the roles of psychiatric mental health nursing in Jordan in collaboration with the World Health Organization (WHO). The purpose was to improve mental health settings to maintain clients' dignity through a sound nursing and multidisciplinary psychiatric mental health care.

Methodology

Psychiatric Mental Health Nursing is a dynamic and crucial realm in nursing with applications in education, research and practice. The National Professional Standards for Psychiatric Mental Health Nurses were developed and approved by the JNC in 2015. This set of standards was developed by reviewing and adapting the best available evidence from:

1) International models and frameworks of nursing of PMHN standards
2) Continuous consultation with mental health leaders and experts
3) Feedback provided by advanced practice mental health nurses in a variety of settings

The JNC also developed principles of assessment to help mental health nurses implement these standards and utilize them as means for performance appraisal.

Purpose

The purpose of this document was to improve mental health services and outcomes for individuals suffering from mental health problems, as well as outline the core competencies and qualifications for nurses providing mental health services in Jordan. These standards were based on the registered nurse (RN) standards of practice. Collectively, these standards illuminate what psychiatric mental health nurses do, help nurses at the different levels of practice understand their professional responsibilities, maintain their own professional development, and enhance and change policies and practices and resolve professional practice problems. Additionally, these standards have the potential to inform and guide continuing education programs to the advanced professional development of PMHN.

Domains of the Standards

The JNC Professional Standards for (PMHN) & (PMH-NS) are divided into 2 domains; **(a)** Professional Standards, and **(b)** Practice Standards. The Professional standards are the core competencies by which nursing performance is assessed to obtain and retain registration and certification. Practice standards are statements about levels of performance that MH nurses are required to achieve in their practice. The professional standards for mental health nursing contain 10 main standards relating to: Ethics, Professional Development, Evidence Based Practice and Research, Quality of Practice, Communication, Collaboration, Environmental Health and Safety, Health Promotion and Prevention, Professional Leadership & Resource Utilization, Quality Improvement. The practice standards consist of one standard " Provision of Clients Centered care" and 6 sub-standards including: Assessment, Identify Issues/ Problems or Trends, Outcome Identification, Planning, Implementation and Evaluation.

Framework for Psychiatric Mental Health Nursing Practice in Jordan

1. **Scope of Practice**

Psychiatric Mental Health Nursing (PMHN) is a specialized area of nursing practice. It is an art and science, which aims to promote and provide psychiatric and mental health care. PMH nurses carry out assessment, diagnosis, and treatment of human responses to actual or potential mental health problems, and/or psychiatric disorders. PMH nurses work with clients across the lifespan and in a wide variety of health care settings. Psychiatric mental health nurses use self artfully and purposefully to integrate evidence-based knowledge and interventions from nursing, neurobiological, psychopharmacological and psychosocial fields to achieve quality care outcomes that are effective, safe, and ethical.

Psychiatric Mental Health Nurses provide holistic health care to individuals, families, and groups across the life span in a variety of settings, including hospitals, long-term care facilities, and community-based settings. Within his or her scope of practice, the PMH nurse is responsible for managing health problems encountered by the client and is accountable for health outcomes. This management of health-related problems consists of: (a) Assessment; (b) Diagnosis; (c) Development of a plan; (d) Intervention; and (e) Evaluation.

At the Primary mental health care level, PMH nurses provide care under three main levels of prevention; health promotion and illness prevention, therapeutic care and treatment of psychiatric disorders and rehabilitation. PMH nurses provide health promotion, preventive interventions, health education, screening, and appropriate referral to treatment of general or complex potential and/or actual mental health problems. PMH nurses also provide specialized management for those with psychiatric disorders and those at risk of them, and psychiatric rehabilitation.

The scope of PMHN practices includes providing care in different care settings such as primary health care centers, acute psychiatric care settings, general hospitals, outpatient units, crisis intervention centers, case management units, and/or outreach healthcare settings. PMHN practices includes, as well, assuming leadership roles and advocating beneficiaries' rights. Other health care settings may expand PMHN practice areas in the future.
Essential components of this specialty practice in nursing include the roles of Clinical Nurse Specialists (CNS) and Psychiatric Mental Health Nurse Practitioners (PMHNP), who provides care utilizing the bi-psychosocial model, through:

- Diagnosis and treatment of common acute psychiatric problems, illness, and crises;
- Psychopharmacologic management of disorders in collaboration with psychiatrists;
- Individual, group, and family psychotherapy;
- Assessment of clients, synthesis and analysis of data, and application of nursing principles and therapeutic modalities;
- Care for and counseling with clients with common identified chronic psychiatric conditions;
- Coordination and integration with multidisciplinary services for clients with complex psychiatric problems;
- Monitoring common health care problems and referral to specialized medical treatment as needed;
- Providing comprehensive family psychiatric-mental health education;
- Working with clients and their families in anticipation of developmental milestones or life cycle events;
- Conducting and utilizing research; this includes conducting research studies, participating in research groups, and integrating research skills and research-based practice into practice;
- Performing or recommendation of age-appropriate screening procedures;
- Promoting wellness-oriented self-care;
- Advocating for family psychiatric-mental health clients and their families;
- Counseling to individuals, families, and groups; this includes consultation and/or collaboration with other health care providers and community resources;

- Referral to other health care providers and community resources (i.e., management and coordination of care);

2. Levels of Psychiatric Mental Health Nursing Practice

Jordanian psychiatric mental health nurses are educationally prepared in nursing and licensed to practice by the Jordanian Nurses and Midwives Council (JNMC), the Ministry of Health, and the JNC. Levels of practice are differentiated by educational preparation, complexity of clinical practice, and performance of certain nursing duties and functions. According to the Jordanian Nursing Council, by law, psychiatric nurses are classified into the following levels:

The Psychiatric–Mental Health -Nurse Practitioner (NP)

A Psychiatric–Mental Health -Nurse Practitioner (NP) is educated at the master level with the required competencies to provide continuous and comprehensive mental health care. NPs deliver advanced care to a variety of patients in the clinical setting. NPs work "autonomously and in collaboration with healthcare professionals and other individuals, to provide a full range of primary, acute, and specialty health care services."

Nurse Practitioner (NP) Credentials

- JNMC registration and licensure in accordance with the provisions of the Public Health Law.
- Obtained, at least a second university degree (Master's Degree) from an accredited university or educational institution in a field of specialty listed and recognized by the JNC
- Fulfilled the specific standards for granting certifications for this professional level issued by the JNC to confirm specialist standing.

NP responsibilities include:

- Order, perform, and interpret diagnostic tests
- Diagnose and treat acute and chronic conditions
- Record and examine medical history, diagnoses, and symptoms
- Prescribe medications
- Manage patients' overall care
- Counsel
- Educate patients and families on disease prevention and the plan of care
- Monitor and operate medical equipment

- Perform physical examinations and patient observations
- Collaborate with other healthcare professionals
- Detect changes in a patient's health and change the treatment plan if necessary

Skills:

- Leadership
- Communication
- Decision-making
- Empathy
- Physical endurance
- Problem-solving
- Integrity
- Advocate
- Responsible
- Delegation
- Compassionate
- Attentive to detail
- Ability to prioritize
- Coordination
- Multidisciplinary team working

The Psychiatric–Mental Health –Clinical Nurse Specialist (PMH-CNS):

- JNMC registration and licensure according to the provisions of the Public Health Law.
- Obtained the second university degree (Master's Degree) at least from an accredited university or educational institution in a field of specialty listed and recognized by the JNC.
- Fulfilled the specific standards for granting certifications for this professional level issued by the JNC to confirm a specialist standing.

The PMH- CNS is educated at the master level with the required competencies to provide continuous and comprehensive mental health care, including assessment, diagnosis, and treatment across settings. Psychiatric-Mental Health Clinical Nurse Specialists are clinicians, educators, consultants, and researchers who assess, diagnose, and treat individuals and families with behavioral, psychosocial, and potential or actual psychiatric problems/disorders. Psychiatric–mental health nursing is necessarily holistic and takes into consideration the

needs and strengths of the individual, family, group, and community as well as the rights of patients.

Responsibilities include:

- Diagnosis and treatment
- Health promotion and wellness
- Maintain patient records
- Conduct research and share the findings
- Research, develop, maintain, and train others in departmental policies, procedures, and patient care standards
- Order tests and evaluate them
- Advise other nurses
- Being a subject matter expert
- Disease management
- Prevention
- Risk reduction
- Prescribe medications

Skills:

- Strong communication
- Ability to educate
- Leadership
- Ability to decipher information
- Professional language skills
- Mental endurance
- Enthusiasm
- Creativity
- Strong clinical knowledge

The Psychiatric–Mental Health -Nurse Specialist (PMH-NS) is the person who:

- Obtained the first university degree (Bachelor's degree) in nursing or its equivalent from an accredited university or educational institution.
- Obtained a diploma degree or equivalent in psychiatric mental health nursing from an accredited educational institution.
- Is registered by the JNMC and licensed to practice under the Public Health Law

passed the evaluation mandated by the Jordanian Nursing Council (JNC) according to the provisions of the bylaw on specialization. A PMH-NS is a registered nurse who demonstrates competence, including specialized knowledge, skills, and abilities, gained through education and experience in caring for persons with mental health issues, & problems, as well as psychiatric disorders, and psychiatric and substance use disorders.

The science of nursing is founded on a critical thinking framework, known as the nursing process, which is composed of assessment, diagnosis, outcomes identification, planning, implementation, and evaluation.

The main functions of the PMH-NS are characterized by the use of the nursing process to deliver care for patients with actual or potential mental health problems, psychiatric disorders, and substance use disorders.

The objectives are to promote and maintain health and safety; assess dysfunction and areas of individual strength; assist individuals achieve their own personal full potential in recovery goals by using or improving coping abilities, daily living skills and symptom management; increase strengths; and prevent further disability.

Data from observational and investigative activities are influenced by the nurse's knowledge of human behavior and the principles of the psychiatric interviewing process.

7.3 Outcome Identification

7.4 Planning

7.5 Implementation

7.6 Evaluation

Standard 1: Ethics

This standard demonstrates ethical decision making in situations that comprise complex issues and arise from ethical dilemmas in the healthcare system.

Competencies

- Practices in a manner conforming to the Jordan Nursing and Midwives Council Code of Ethics.
- Utilizes ethical principles and theories to guide professional practice and ethical decision making.
- Ensures client's rights of informed consent, confidentiality and privacy that is consistent with the client's legal rights.
- Assists clients in developing the skills to protect their own rights.
- Develops sensitivity and awareness to issues that precipitate ethical dilemmas.
- Identifies ethical dilemmas related to client's care issues, multidisciplinary team, organizational, societal, access to resources, justice and legal issues.
- Identifies moral distress in self and others.
- Manages the resolution of ethical dilemmas occurring within the health care system.
- Creates an ethical practice environment.

Additional Competencies for PMH- CNS and NP

- Coaches the PMH-NS in ethical decision making.
- Coaches clients and significant others into making choices of treatment through providing accurate clear information, while considering benefits, risks and outcomes.
- Promotes safe, efficient, equitable, and effective client centered care.
- Evaluates the effectiveness of policies and strategies for managing ethical dilemmas inherent in client care, healthcare organizations, and research.
- Provides safeguards to protect clients' rights while planning, conducting, or disseminating research findings.
- Prescribes medication under the umbrella of pertinent legislative and institutional regulations.
- Abstains from prescribing medication to himself or family, except in urgent situations when there are no other prescribers available.

Standard 2: Professional Development

The PMH-NS is committed to the continuous development of knowledge and competencies through systematic and effective mechanisms for professional development programs.

Competencies

- Engages in continuing education activities.
- Participates in multidisciplinary educational activities to promote health care team collaboration.
- Participates in the evaluation and regulation processes of individuals through privileging, credentialing, certification and accreditation.
- Acquires knowledge and skills appropriate to their specialty area, practice setting, role or situation.
- Uses creativity and innovation in psychiatric mental health professional activities to improve care delivery.

Additional Competencies for PMH- CNS and NP

- Advocates for a working culture that promotes motivation and enthusiasm towards professional development.
- Coaches PMH-NS and multidisciplinary team members to improve client centered competences.
- Designs, implements, and evaluates continuing education programs to meet professional advancement needs.
- Participates in research activities related to the improvement of staff competencies and quality of care.
- Ensures the effectiveness of mechanisms and programs for implementing and evaluating professional psychiatric mental health standards.

Standard 3: Evidence-Based Practice and Research

The PMH-NS integrates research findings into practice and exhibits familiarity with current research and evaluation in mental health and uses valid research and evidence to reach clinical judgments.

Competencies

- Translates evidence-based research findings into clinical decision making.

- Maintains current psychiatric nursing practices updated to the latest available research evidence.
- Participates in improving the quality of care through following the evidence-based practice process.
- Participates with the multidisciplinary team members in evaluating the quality of clients' care to the updated evidence found in research.

Additional Competencies for PMH- CNS and NP

- Interprets and utilizes evidence-based practice to develop policies for client's care.
- Utilizes evidence-based practice to determine standards of care.
- Disseminates evidence-based practice evaluation outcomes.
- Builds a work environment that inspires clinical inquiry and creativity in utilizing evidence-based practice and research.

Standard 4: Quality of Practice and Professional Practice Evaluation

The PMH-NS continually monitors and ensures the effectiveness and efficiency of quality in nursing practice.

Competencies

- Identifies issues in the workplace, care setting, community, and/or society that hinder the nurse's ability to provide safe and compassionate nursing interventions.
- Confirms quality through documenting the application of care according to approved organizational indicators.
- Initiates changes to employ new nursing practices and for the health care system based on the results of quality enhancement activities.
- Improves the delivery of care using valid, creative, and novel ideas in nursing practice.
- Participates in quality improvement activities.
- Advocates for the right to participate in health policy development.
- Promotes the development of professional nursing practice.
- Requests informal feedback pertaining to their own practice from healthcare people, peers, professional colleagues, and others.
- Assesses clients' care outcomes in order to improve the quality of care provided.

Additional Competencies for PMH- CNS and NP

- Attains and maintains professional certification at the advanced level in psychiatric–mental health nursing from the Jordanian Nurses and Midwives Council.

- Educates the PMH-NS and other colleagues in the conduct of quality and performance improvement projects.
- Identifies opportunities for using generated data from evidence-based practice and research.
- Evaluates clinical practice environment and quality of nursing care provided in relation to existing evidence-informed knowledge.

Standard 5: Communication

This standard embodies the nurse's ability to communicate effectively and therapeutically in various forms in all areas of practice.

Competencies

- Exhibits knowledge and understanding of human behavior underlying the variety of responses to different life situations.
- Communicates acceptance, unconditional respect, listening, empathy, genuineness, warmth and caring in interacting with clients, significant others, and healthcare team members.
- Uses communication skills therapeutically.
- Seeks the ongoing development of communication and conflict resolution abilities.
- Communicates sensitively, honestly, and respectfully with clients to anticipate and address their needs.
- Utilizes effective communication strategies and interventions depending on the situation such as: interviewing, problem solving, helping others, giving information, or handling aggressive and suicidal behaviors.
- Recognizes the different styles of communication exhibited by clients, significant others, and health care providers.
- Reflects on own communication style in relating to others in a variety of situations.
- Conveys information to clients, significant others, and healthcare providers in an accurate, clear and simple language.
- Keeps open and facilitative communication with inter-professional members to prevent error or risk associated with provision, transfer, or transition of care.

Standard 6: Governance, Leadership, Resource Utilization, and Evaluation

This standard focuses on delivering leadership in the professional practice setting; evaluating progress toward meeting expected outcomes; and planning and delivering nursing services, considering safety, effectiveness, cost, and impact on practice.

Competencies

- Participates in teamwork as a team player, team builder and as a team member.
- Acts to generate and maintain healthy work environments in local, regional, national, or international communities.
- Shows the ability to state a clear vision with the associated goals and a plan to implement and measure progress.
- Exhibits a commitment to continuous education and lifelong learning for self and others.
- Develops, implements, and evaluates programs to promote health and safety.
- Uses mentoring and other strategies to help others succeed.
- Displays creativity and flexibility through times of change.
- Exhibits energy, excitement, and a passion for quality work.
- Uses mistakes by self and others as opportunities for learning in order to encourage risk taking.
- Motivates loyalty by valuing people as the most valued resources in an organization.
- Use Supportive Supervision for subordinate and utilize different supervision types.
- Participates in committees, councils, and administrative teams.
- Participates in professional organizations to promote the advancement of the profession.
- Accepts accountability and responsibility for his/her own professional judgment and actions.
- Seeks measures to promote the autonomy and accountability of nurses.
- Knows the limits of his/her own role and competence.
- When nursing care requires expertise beyond one's own current competence or scope of practice, consult with a PMH- ANS who has the required expertise.
- Consults with other health care professionals and pertinent organizations/agencies when individual or group needs are beyond the scope of nursing practice.

- Positively affects the professional practice environment and patient outcomes by exerting a positive impact on decision-making bodies.
- Promotes recovery-oriented services for mental health and psychiatric disorder prevention and treatment.
- Provides guidance to improve interprofessional team efficacy.
- Invents new ideas to improve health outcomes.
- Appraises factors such as safety, effectiveness, availability, cost–efficiency, and impact on practice when selecting practice options that would result in similar clinical outcomes.
- Contributes to developing national legislation, standards, policies, and practice guidelines associated with mental health nursing care.
- Helps the client and family in recognizing and securing accurate information and available services to address health-related needs.
- Mentors registered nurses and students, and other health professionals.
- Assigns and or delegates elements of care to appropriate healthcare workers, taking into consideration the abilities of the health care worker.
- Utilizes data from continuing assessments to modify diagnoses and problems, as well as outcomes and interventions, whenever necessary.
- Determines the impact of adopted institutional strategies on healthcare consumers, families, groups, and communities by synthesizing the results of evaluation analyses and conducting additional research as necessary.
- Contributes to improving the professional practice environment and the outcomes for healthcare consumers by influencing decision-making bodies.
- Helps clients and families become informed about the options, costs, risks, and benefits of treatment and care.
- Requests for resources, including technology, that promote quality care and locates the evidence when evaluating resources

Additional Competencies for PMH- CNS and NP

- Delegates according to staff abilities and scope of practice and supervises aspects of care delegated to others and gives support as needed.
- Upholds accountability and responsibility when delegating aspects of care to others.

Standard 7: Collaboration

This standard demonstrates collaboration between healthcare teams, individuals, families, communities, and other stakeholders in the conduct of nursing practice.

Competencies

- Shares knowledge and skills with peers and colleagues through conferences or presentations at formal or informal meetings.
- Provides peers with feedback regarding practice and role performance.
- Interacts with peers and colleagues to enhance their professional nursing practice and role performance.
- Maintains professional relationships with peers and colleagues.
- Contributes to an environment that is conducive to the education of healthcare professionals.

Additional Competencies for PMH- CNS and NP

- Models expert practice to interdisciplinary team members and healthcare personnel.
- Mentors and provides clinical supervision to other registered nurses and colleagues as appropriate.
- Participates in interdisciplinary teams that contribute to role development and advanced nursing practice and health care.
- Partners with other disciplines to enhance healthcare through inter-professional activities such as education, consultation, management, technological development, or research opportunities.
- Facilitates an inter-professional process with other members of the healthcare team.

Standard 8: Environmental Health and Safety

This standard aims to practice in a safe and healthy workplace for persons, carers, families, visitors and workers.

Competencies

- Obtains knowledge of environmental health concepts, such as implementation of environmental health and safety strategies.
- Establishes and maintains a safe environment of care through the use of quality assurance and risk management strategies.
- Identifies actual and potential risks using appropriate assessment tools.

- Devises a practice environment that reduces environmental health risks for workers and patients/persons.
- Safeguards the safe administration of therapeutic substances and reduces the use of restraint and seclusion.
- Evaluates the practice environment for factors such as sound, odor, noise, and light that threaten health.
- Applies infection control procedures.
- Communicates environmental health risks and exposure reduction strategies to persons, families, colleagues, and communities.
- Contributes in strategies to promote healthy communities.
- Monitors and reduces the risk of harm or suicide and responds to aggressive behavior.

Additional Competencies for PMH- CNS and NP

- Encourage partnerships that sponsor sustainable environmental health policies and conditions.
- Analyzes the effects of social, political, and economic issues on the environment and human health exposures.
- Evaluates the manner in which environmental health issues are presented by the popular media.
- Supports implementation of environmental principles for nursing practice.
- Assists nurses in advocating for and implementing environmental principles in nursing practice.
- Completes risk assessments throughout all stages of the care continuum and from admission to discharge.
- Performs regular reviews of safety in all units, for identification, intervention and resolution of any safety issue.

Standard 9: Health Promotion and Prevention

Mental health promotion is an integral part of all mental health work. The PMH-ANS uses mental health promotion and primary prevention principles, and seek to build resilience in communities, groups and individuals, and prevent or reduce the effect of mental illness.

PMH- ANS

- Creates and implements strategies across the mental health spectrum that identify the current status of people's wellbeing to:

- ✔ Address the determinants of health and risk factors.
- ✔ Decrease stigma and discrimination.
- ✔ Promote and maintain mental health and resilience across the lifespan.
- ✔ Raise awareness across populations and communities on mental health and wellbeing, mental health problems, mental disorders and comorbidity in order to prevent onset across the lifespan

- Finds opportunities for improvement in physical health, exercise, recreation, nutrition, expression of spirituality, creative outlets and stress management
- Applies mental health promotion practices embedded in the community
- Implements culturally relevant and appropriate health promotion and primary prevention approaches to people from diverse backgrounds
- Works with people, families and carers to understand factors that trigger periods of illness, and what helps prevent or resolve these periods
- Delivers appropriate, culturally relevant mental health learning resources, education and support materials to people, families and careers.
- Improve MH literacy
- Demonstrate raising awareness activities

Standard 10: Quality improvement

The PMH-NS, PMH-CNS, and PMHNP collaborate with individuals and families with mental illness and team members to achieve the treatment plans outcomes and provide a quality of psychiatric nursing care. The PMH-advanced nursing practices take active steps to advance psychiatric services and mental health practices using quality-improvement frameworks.

Competencies for advanced nursing roles (PMH-SN-CNS-NP) involve all of the following:

- Participates in quality improvement processes
- Requests resources and equipment to improve service delivery
- Contributes to organizational systems and support a culture that respects the rights of beneficiaries including service users, their families and caregivers
- Utilizes appropriate tools and outcome measures to support, record and monitor improvement in practice and takes steps to address problems in practice utilizing global standards and evidence-based research

- Supports working in partnership with individuals and caregivers to evaluate service planning to improve outcomes and safeguard greater participation at all levels
- Encourage healthcare providers to be positive, accountable, and able to find solutions.
- Assess patients and psychiatric and mental health care outcomes utilizing principles of cost-effectiveness and economic comparative quality of care.

Standard 11: Provision of Client Centered Care

This domain focuses on the provision of comprehensive, systematic and priorities of care to achieve the identified healthcare outcomes utilizing the bio-psycho-social model. Empathy and ensuring effective interpersonal and therapeutic communication skills are crucial to ensure reaching the desired outcomes. This includes verbal and nonverbal messages to share information, meanings and feelings with service users to appreciate and understand their perspectives of mental health needs.

Mental health nurses must adapt their communication approaches to the individuals' needs, to provide high quality assessment, care and treatment. This requires competency to assess and support individual client needs through provision of client-centered care based on scientific approaches. The PMH practice domain standards consist of one standard and six sub-standards. In addition, the client-centered care requires engaging patient's family/caregiver in the care plan process.

11.1: Assessment

The **PMH-NS** collects comprehensive health data that is pertinent to the patient's health or situation.

Competencies of the PMH-NS

- Collaborates with service users to gather data through conducting holistic *assessments* utilizing observation, examination, interview, and consultation, while being attentive to issues of confidentiality and pertinent legal status.
- Collects comprehensive data including, but not limited to, physical, functional, biological, psychosocial, emotional, spiritual, cognitive, sexual, cultural, age-related, environmental, and economic assessments in addition to substance use assessment. The assessment should be in a pertinent and ongoing process, focusing on the uniqueness of the person.

- Reflects the individual's values, preferences, knowledge of the healthcare situation, expressed needs and recovery goals. Involve the individual, family, other support persons, and healthcare providers, as needed, in holistic data collection.
- Identifies barriers to effective communication and makes appropriate adaptations incorporating effective clinical interviewing skills to facilitate development of a therapeutic relationship and to collect information.
- Identifies the impact of personal attitudes, values, and beliefs on health status and adherence to mental health treatment.
- Assesses family dynamics and their impact on the person's condition, or the anticipated needs of the person.
- Prioritizes data collection activities which are founded on the person's condition, anticipated needs or situation.
- Uses appropriate evidence-based assessment techniques, instruments and tools in collecting core data.
- Uses therapeutic principles in order to understand and interpret the person's emotions, thoughts, behaviors and condition.
- Applies ethical and legal guidelines and policies to the collection, maintenance, use, and dissemination of data.
- Analyzes, interprets and documents data accurately.
- negotiate their assessment data with the other members in the mental health team for the purpose of validation and confirmation, and accuracy of data collected.

Additional Competencies for the Psychiatric Clinical Nurse Specialist, Advance Practice Nurse (PMH- ANS)

- Performs a comprehensive evaluation of data to assess psychiatric and mental health.
- Conducts a multigenerational family assessment, including medical, mental health, psychosocial, psychiatric and substance use history.
- Assesses the effect of interactions among the individual, family, group, community, and social systems and their relationship to mental health functioning, in health and illness.
- Adopts evidence-based clinical practice guidelines to guide screening and diagnostic activities related to psychiatric and other medical comorbidities.
- be able to retrieve additional data and/or confirm the collected ones related to services users; patients, families and caregivers.

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH- NP)

- Assess prior personal and family history of response to certain medications.
- Assess the client's motivation for and any misgivings about treatment
- Identify potential interactions between the currently prescribed medications.
- Identify cultural implications of certain drugs.

11.2: Diagnosis

The PMH- advanced roles identify the needs or areas of need for care, in collaboration with the individuals, families and caregivers. The PMH-advanced roles identify the actual, potential risks, areas of concern for care and treatment; the related dynamic or causative factors and observed behaviors.

Competencies for MHN advanced roles:

- Identifies client's health and safety issues that are considered actual or potential risks and needs.
- Synthesize evidence from collected data to infer or state the problem that is congruent with the client's perspective and available classification system.
- Establish related or causative factors that are explained through scientific and evidence based knowledge.
- Formulate a list of nursing diagnoses, problems or needs in collaboration with the client, significant others and a multidisciplinary team, and consistent with client-centered and recovery-oriented practice.
- Document nursing diagnoses or problems that serve as a base for developing expected outcomes and care plans.
- document data that confirm and validates the medical diagnosis of the patient
- show competency to utilize the diagnostic criteria proposed by the international guidelines such as the DSM-5-TR or the ICD-11
- create a plan of care that integrates the pharmaceutical and non-pharmaceutical interventions utilizing therapeutic modalities of psychotherapy such as CBT or similar models.

Additional Competencies for PMH- ANS

- Identify a psychiatric and substance use disorder according to the approved classifications.
- Formulate a differential diagnosis by comparing and contrasting clinical findings
- Assist the PMCH-NS and other staff in developing and maintaining competency in problem identification and the diagnostic process.

- Evaluate the impact of psychiatric disorders and mental health problems on client's mental physical and social health; their recovery, functional level and quality of life

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH- NP)

- Make a diagnosis and identify the target symptoms related to drug use and prescribed interaction ones.

11.3: Outcomes Identification

The PMH-advanced roles NS define the expected outcome of nursing care that is client-centered and recovery oriented in collaboration with the client, significant others and the interdisciplinary health team to provide optimal quality care.

PMH-advanced roles Competencies

- Identify outcomes of nursing care that are client-centered and recovery-oriented.
- Identify outcomes that address the client's health status, risk factors, problems and responses to illness and daily life events.
- Formulate expected client's health outcomes that are measurable and achievable with an individualized timeline of accomplishment.
- Collaborate with the client, significant others and multidisciplinary health team members to develop outcome criteria and goals that are derived from the nursing diagnosis and the multidisciplinary mental healthcare approach.
- Weigh the benefits, risks, costs, clinical expertise and evidence-based knowledge when formulating achievable outcome criteria.
- Develop expected outcomes that addresses continuity of care within the healthcare system.
- Document expected outcomes in a client-focused format, using simple and clear language, that is understandable to the client and significant others.
- Modify expected outcomes in collaboration with the client, significant others and the multidisciplinary team as a response to changes in health status or situation.

Additional Competencies for PMH- ANS

- Assists the PMH-NS and multidisciplinary team members in identifying expected outcomes that integrates scientific evidence to enhance the implementation of evidence-based practices.
- Develops, revises, implements and upgrades regularly clinical policies, guidelines and procedures to promote positive outcomes.

- Develops expected outcomes that ensures cost effectiveness, continuity, consistency, and quality of care among the interdisciplinary team members.

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH- NP)

- Discuss the risks and benefits of the treatment.
- Document informed consent and the client's understanding of target symptoms, benefits, risks, and alternatives to treatment
- use screening tests to make a diagnosis and rule out other disorders.

11.4: Planning

PMH-advanced roles Competencies

The PMH-advanced roles develop a nursing care plan that identifies the outcome of nursing care in collaboration with the client, significant others and the Multidisciplinary health team members

PMH-advanced roles Competencies

- Develop a plan of care that is based on strategies and alternatives to assist the client in the achievement of expected outcomes.
- Develop a client-centered plan by collaboration with the client, significant others, and multidisciplinary team members to facilitate optimal compliance and involvement,
- Consider different variables that will enhance the plan of care such as client's strengths, developmental level, cultural background, preferences, coping abilities, presence of support system, resources, feasibility of services and technology
- Consult with or refer to other social agencies when needed.
- Ensure that the client and/or significant other receive and understand information before signing the consent for care.
- Establish the care plan priorities in collaboration with the client, significant others and multidisciplinary health team members
- Prioritize plan of care according to the risk assessment to harm self or others or other safety needs.
- Plan care within a therapeutic environment that is least restrictive
- Include an individualized unique clinical pathway that identifies the timeline and continuity of care.
- Incorporate current scientific advances, trends and research and other practice-based evidence.

- Modify the plan based on ongoing assessment of client's responsiveness to interventions and progress towards recovery.
- Documents the care plan using client-centered terminology.
- integrate nursing interventions including those utilizing the psychological interventions into the multidisciplinary mental healthcare approach.

Additional Competencies for PMH- ANS

- Monitor and evaluate the flow of care according to the plan and client's status to ensure consistency in applying the plan
- Design new approaches and strategies that are evidence based that are geared towards the changing needs of the client.
- Coordinate plans to utilize different treatment modalities to minimize and prevent complications; promote recovery and optimal quality of life.
- Incorporate client expectations, attitudes, values and beliefs related to the choice of planned therapeutic modalities.
- Participates in enhancing controllability, validation and continuous improvement of internal and external support systems in planning the caring process.

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH- NP)

- Use standardized clinical rating scales to establish the client's baseline and to monitor progress or decompensation over time.
- Assist in determining length of treatment.
- Do relapse planning

11.5: Implementation

The PMH-advanced roles implement the nursing care plan that is agreed upon with the client, significant others and multidisciplinary healthcare team, and carries the nursing care plan according to qualification and the institution's policies

The PMH-NS implements the plan.

Competencies: The PMH-advanced roles will:

- Coordinate with the client, significant others, and multidisciplinary team member to implement the different parts of the plan in a safe, realistic, and timely manner.
- Maintain a therapeutic relationship with the client and significant others to facilitate recovery.

- Respect the boundaries of a professional relationship in working with clients, significant others and multidisciplinary team members.
- Use evidence based nursing interventions and treatments specific to the client's health problem.
- Employ available community resources to facilitate the implementation of the care plan.
- Provide care and treatment for clients with various physical, mental health problems, psychiatric disorders and substance use disorder.
- Deliver nursing care that focuses on the client as a person as a whole with the disorder as part of the person
- Supervise other nursing staff in carrying out nursing interventions
- Incorporate cultural, traditional and alternative healthcare practices as appropriate to client's health status
- Document implementation and any modifications, changes, additions or omissions in the plan of care.
- Integrate new knowledge and strategies to initiate change in care plan, when desired outcomes are not achieved.
- Respond effectively and rapidly to psychiatric emergencies through early identification, assessing the risk, initiating plan and managing the situation
- Show competency in developing, utilizing and using the psychological interventions and psychotherapy approaches
- Show competency in developing case management protocol of treatment utilizing knowledge and skills related to psychiatric nursing interventions, psychotherapy, and mental health counseling.

Additional Competencies for PMH-ANS

- Implements the plan by facilitating the use of organization and community resources.
- Collaborates with nursing colleagues and other disciplines to implement the plan.
- Monitors and supervises the PMH-NS in the implementation of the plan.
- Participates in the development and continuous improvement of quality of care services that support the enactment of the plan.

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH-NP)

- •Monitor response and side effects of treatment, especially psychopharmacological treatment.
- Recognize the large body of evidence-based data supporting the combined use of pharmacological and nonpharmacological treatments as offering psychiatric clients the best possibility for significant clinical improvement.
- Continuously observe and focus on nonadherence during treatment and follow up visits.

11.5. A: Coordination of Care

PMH-advanced roles Competencies

- Coordinate implementation of the different components of the planned care
- Manage the client's care to enhance independence and optimize recovery and quality of life.
- Assist the client to identify options for the alternative types of care provided by the different health care professionals.
- Involve the client, significant others and the different systems during the period of care transition.
- Ensure respecting client's humanity and rights in the process of delivering care by the interdisciplinary health team
- Document the coordinated care plan approved by the multidisciplinary team members

Additional Competencies for PMH- ANS-PMH-NP

- Takes leadership to manage and coordinate the delivery of integrated planned care among the multidisciplinary team members
- Coordinates the continuity of client care through the continuum of health care system services and community resources.

11.5.B: Therapeutic relationship

The PMH-advanced roles develop a therapeutic nurse-client relationship to build a foundation for counseling clients to provide effective and quality care that contributes to the client's wellbeing. Specifically, to restore previous functional abilities, prevent and manage relapses, and establish independent living within the community

Competencies: The PMH-advanced roles will

- Establish rapport with the client communicating acceptance, respect, listening, empathy, caring and presence

- Develop a mutual partnership with the client to achieve outcomes of treatment plan and recovery.
- Use evidence-based therapeutic communication and counseling strategies to enhance client's wellbeing and sense of autonomy, restore previous functional abilities, prevent and manage relapses and establish an independent living in the community,
- Use self-awareness to monitor own emotional reactions and responses to the clients and significant others, to improve the counseling process,
- Maintain professional boundaries in interacting with the clients.
- Maintain confidentiality and ensure privacy and dignity of the client in sharing information and legal records of care with other health care providers
- Documents counseling sessions' content and response

11.5.C: Therapeutic Milieu

The PMH-NS, PMH- ANS, and PMH-NP collaborate with the different health care providers to develop, supervise and maintain a therapeutic milieu that provides structure, safety, and brings behavioral changes to improve the functioning and recovery of the client.

Competencies

- Orient the client and significant others to the care environment, including the physical environment, safety measures, rules and regulations, structuring of the treatment within the environment, roles of multidisciplinary team members, significant others roles and expectation in the process of care.
- Help clients know their rights and responsibilities during their presence in the treatment program.
- Continuously observe clients within the health care environment to facilitate and evaluate nursing interventions that ensure safety.
- Participates in structuring the physical environment to enhance comfort and safety
- Develop an individualized program of activities on the individual and group levels to meet the client's choices and needs for meaningful participation in daily routines.
- Advocate for the use of least restrictive measure to maintain a safe environment
- Participate in formulating individualized plans of limit setting on unsafe or social and culturally unacceptable behaviors with specifications on the conditions for removing the limits.

- Provide psychologically safe environment that facilitates client's growth, independent self-care, discussion of experience with illness, feelings, concerns with relapse management and prevention; stigma, and conflict with significant others and external community.

Practices open communication among health care providers and clients to promote feelings of hope, acceptance, self-worth and satisfaction

11.5.D: Teaching/ Coaching/ Counseling

The **PMH-advanced roles coach** clients and significant others through utilizing teaching/learning opportunities that promotes mental health, prevents illness, and maintains health to reach the highest level of wellness possible

Competencies The **PMH-advanced roles will:**

- Collaborate with clients and significant others to identify learning needs, taking into consideration life experiences, cultural values and beliefs, attitudes and readiness to learn, learning style and available resources.
- Implement psycho-educational programs for clients and significant others as part of discharge planning to enhance adherence to treatment, symptom management and relapse prevention taking into consideration the client's cultural background, learning abilities and the presence of a support system.
- Incorporate evidence based knowledge, strategies and intervention in the learning-teaching process.
- Create an environment that is conducive to an effective learning/teaching process.
- Utilize learning/teaching moments as they occur during practitioner-client interaction
- Coach clients through the health education sessions by listening, inquiring and clarifying, reminding, giving feedback, sharing, supporting and encouraging to bring about self-determined changes in health status.
- Coach clients and significant others in monitoring and following through the new learned skills.
- Evaluate with the client and significant others the effectiveness of the learning/teaching process.
- Utilizes community resources to support the client to maintain learned behaviors

Additional Competencies for PMH- ANS and PMH-NP

- Develops health education programs that support national health and social care policies.
- Incorporates counseling and coaching strategies and skills in the teaching/learning process.
- Utilizes counseling/coaching to inform and educate clients and their significant others about the different treatment modalities, benefits and adverse consequences.
- Synthesizes evidence-based knowledge, theories and applied research findings in designing mental health-psychiatric education programs for different populations Utilizes knowledge from epidemiology, social, cultural health care practices and political issues to enhance mental health promotion.
- Appraises health related information resources (such as radio and television programs, movies and internet) for reliability, accuracy, simplicity, readability and comprehensiveness for clients and the public in general
- Assists PMH-NS in developing health education programs for health promotion and prevention

11.5.E: Pharmacological, Biological, and Integrative Therapies

The PMH-NS and or PMH- ANS: integrates knowledge of pharmacological, biological, and complementary interventions with applied clinical skills to restore health and prevent further disability.

Competencies: The **PMH-advanced roles**

- Utilize current research findings to guide nursing actions related to pharmacology, other biological therapies and other therapies.
- Assess client responses to biological interventions based on current knowledge of Psychopharmacology, their intended actions, interactive effects, adverse effects, and therapeutic doses.
- Include health teaching for medication management, medication mechanism of action, intended effects, potential adverse effects to support persons in managing and adhering to their own medications and following prescribed treatments and drugs.
- Guide interventions toward reducing untoward effects of biological interventions.
- Communicate to other health clinicians. observations about client response to biological interventions

- Support clients to draw on own assets and resources for self-care and mental health promotion

Additional Competencies for the Psychiatric Mental Health-Nurse Practitioner (PMH-NP)

- Identify potential interactions between the currently prescribed medications.
- Identify cultural implications of certain drugs.
- Discuss the risks and benefits of the treatment.
- Document informed consent and the client's understanding of target symptoms, benefits, risks, and alternatives to treatment.
- Monitor response and side effects
- Use of standards of care:
- Assist in determining length of treatment.
- Do relapse planning.
- Use standardized clinical rating scales to establish the client's baseline and to monitor progress or decompensation over time.
- Use screening tests that will aid in making a diagnosis and ruling out other disorders.

11.5.F: Psychotherapy, Cognitive Behavior Therapy (CBT) and Other Therapies

The PMH-NS, or PMH- ANS: with appropriate credentials conducts individual, couples, group, and family psychotherapy, CBT and other therapies using evidence-based psychotherapeutic frameworks and therapeutic relationships.

Competencies: The **PMH-advanced roles**

- Utilizes knowledge of biological, psychosocial, and developmental theories, as well as best available research evidence, to choose therapeutic methods based on individual identified needs.
- Uses interventions that facilitate establishing trust relationships to maintain a therapeutic treatment alliance and adherence.
- Reduces emotional distress, facilitates cognitive and behavioral change, and fosters personal growth through therapeutic communication.
- Empower the client to be an active participant in his /her treatment.
- Utilizes ethical and legal principles in the treatment of clients with mental health problems and psychiatric disorders.
- Standardizes methods as appropriate to evaluate effectiveness of interventions in achieving outcomes.

- Examines outcomes of therapy and adjusts the plan of care as necessary
- Manages professional boundaries in order to preserve the integrity of the therapeutic process.
- Collaborate with other healthcare professionals to ensure accurate application of psychotherapy and observe the progress of the client during and after psychotherapy sessions.

11.6. Evaluation

The mental health nurse evaluates progress in attaining the identified goals of the client and the expected outcomes of the nursing care plan in collaboration with the client, the family and the interdisciplinary health team

The PMH-NS: evaluates progress concerning the accomplishment of expected outcomes.

Competencies: The **PMH-advanced roles**

- Carries out a comprehensive, ongoing, evaluation of the outcomes / goals in relation to the employed interventions indicated in the plan and within the given timeline.
- Works in partnership with the client, significant others, and the multidisciplinary team members in evaluating the provided care.
- Evaluates the client's response to the planned care strategies.
- Revises the diagnosis, outcomes, and interventions against new assessment data.
- Modifies the plan with the client and multidisciplinary team members according to the given situation, appraisal and new data.
- Participates in supervising appropriate implementation of a plan to minimize unexpected or unwanted adverse effects of treatment on the client.
- Documents results of the evaluation.

Additional Competencies for PMH- ANS and PMH-NP

- Appraises the accuracy of the diagnosis and the efficiency of the interventions related to the client's attainment of the expected outcomes.
- Synthesizes evaluation data in order to decide the impact of the plan and interventions on clients, significant others, organization and community.
- Utilizes the results from evaluation data in order to propose new changes, including policies, procedures, documentation forms or other changes according to findings.
- Assists the PMH-NS, or RN in the evaluating and re-framing complex care plans

Appendix One

Main Clinical Indicators for Psychiatric Mental Health Nursing

Indicator	Percentage of Prevalence	Measure
Psychiatric Physical/Sexual Assault Rate	% of pts who physical/Sexual Assault	Outcome
Restraint Prevalence	% Pts who have restraints and hours of restraint	Outcome
Continuity in care	% pts followed after discharge	Outcome
Case management for severe psychiatric disorders	Number of patient who had their case managers	Process/outcome
Seclusion	Number of patient on seclusions and hours	Process/outcome
Patient discharged on multiple antipsychotic medications	% of patients discharged on multiple psychotic medication	Outcome
Communication with patients	% increase communication with patient and family	
Quality of Care	Percentage describing the quality of care on their unit as excellent	Outcome /process
Medication administration and other psychotherapy interventions	Percentage of nurses reporting occasional/ frequent wrong medication % of psychotherapy pts had	Outcome/process
Practice: effectiveness	Time available to listen to pts Making pts worthy Occupying pts time with therapeutic interventions Respecting patients Keeps confidentiality Patient involvement in treatment Plan	
Length of Stay	%Average length of stay	
Compliance with medication	% Of pts compliant	

Appendix TOW:

Rights and responsibilities of person with mental disorder

The rights and responsibilities of people affected by psychiatric mental health problems or illness are sustained by PMH-NS, PMH-CNS-ANSs and are documented, obviously showed, applied and sponsored throughout all phases of care in a private and confidential matter.

Practices in line of relevant national legislation, local policies and procedural guidelines and national code of ethics.

- Distinguishes & acts upon breaches of law relating to nursing practice or professional code of ethics.
- Integrate valid research findings and other evidence into practice.
- Sustains the right of the person to be treated with respect and dignity at all times.
- Maintains advocates and endeavors to protect the health, safety and rights of the person/patient and displays commitment to his /her cause.
- Ensures that all care delivered is subject to the informed consent of the voluntary person and as much as possible, by the involuntary person in accordance with national legislative requirements.
- Shares with persons and their carers with a statement of their rights and responsibilities, in a clear and plain way as soon as possible.
- Staff and volunteers are provided with a written statement of the rights and responsibilities of persons and carers, together with a written code of conduct as part of their orientation.

- Communicates with persons, carers and other service providers and applies the rights and responsibilities of involuntary patients according to national mental health legislation and related acts.
- Defends the right of the person to have their needs understood in a way that is meaningful to them and suitable services are rendered when required to support this.
- Supports the right of the person to have their privacy and confidentiality recognized and kept as long as it does not impose serious risk to the person or others.
- Maintains the right of the person to be treated in the least restrictive environment avoid using seclusions or restraints needlessly provided that it does not inflict serious risk to the person or others.
- Advocates for the right of the person to be involved in all aspects of their treatment program.
- Recognizes the right of the person to select if they require to have others involved in their care to the point that it does not impose serious risk to the person or others.
- Upholds the right of carers to be involved in the management of the person's care with the person's informed consent.
- Advocates for the right of persons to have access to their own health records if possible in line with national legislation.
- Enacts policy and procedures to ensure that personal and health related information is handled in accordance with national regulations.
- Promotes the right of the person to access advocacy and support services.
- Upholds the right of the person to express compliments, complaints and grievances regarding their care and to have them addressed by PMH-NS, PMH-CNS-ANS.

- Upholds the right of the person, wherever possible, to have a staff member of their own gender.

- Participates in continuing education in order to sustain high quality nursing as professionals.
- Strives to persistently advance effective nursing practice.
- Advocates for the patient to live a full and humane life in cooperation with one's family and other professionals.
- Advocates and partners with patients and their families for consumer care provider partnership, to assist in their individual recovery goals that are person centered, recovery-oriented and grounded in prevention, reflecting a paradigm shift in this care area.
